Migration and human mobility are cross-cutting issues that cover 11 goals of the SDGs, and they are closely related to the central, transformative promise to "Leave No One Behind" in the SDGs. However, there is no global governance of migration and human mobility, which is still largely dependent on the policies of sovereign nations. This seminar provides essential skills and knowledge to help you conduct your research: research design, literature survey, fieldwork design, data collection, and so on. In this seminar, you will learn about the latest research trends and methodologies by reading articles that have attracted much attention in migration studies. By doing this, you will also learn how to structure a scientific paper, learn the standard expressions frequently used in migration studies, and learn how to write a briefing paper on your selected topic of migration issues.
