The Sustainable Development Goals (SDGs) consist of 17 goals that the international community must achieve in common. International political economics cover a wide range of issues we should tackle to reach the SDGs, but it is very difficult to share these challenges in a common intellectual framework. Each of the instructors in this course comes from a different discipline and deals with different challenges in economics, law, and politics. In this course, instructors take up their own research topics for the SDGs and share how we can resolve the problems we face toward achieving the SDGs. This course provides a first step in pursuing further research in specialized courses.					
達成目標 / Course Goals					
1. To learn basic skills and knowledge for understanding the challenges toward meeting the SDGs 2. To understand the approaches and methodologies of the fields each instructor addresses in his/her research 3. To learn how to exchange opinions with researchers in various fields in tackling the common challenges 4. To pursue the skills and approaches that are appropriate for one's own further research
